

University of Alberta
EAS 421 Structural Geology and Tectonics. Fall 2014

Lecture Room & Time: MWF 10-11, Biological Sciences M137
Labs: MT 2-5, ESB 4-09, with computer work in ESB 1-39

Instructor: John W.F. Waldron
Office: CCIS 3-022 **Lab:** CCIS 3-018
Telephone: 780 492 3892
E-mail: john.waldron@ualberta.ca
Web Page: <http://courses.eas.ualberta.ca/eas421>
Office Hours: MWF 11-12

Teaching assistants: Robert Dokken CCIS 2-045 dokken@ualberta.ca
 Ryan Lacombe CCIS 2-045 rlacombe@ualberta.ca
 Morgan Snyder CCIS 3-019 mesnyder@ualberta.ca

Teaching technician: Marilyn Huff ESB 3-04A huff@ualberta.ca

About the course

EAS 421 is a second course on the structure of the Earth for third and fourth year students in Geology, Geophysics, and related studies. EAS 421 builds upon the basic techniques of structural description learned in EAS 233 - unconformities, fractures, folds, and fabrics - and examines how these structures are formed in the major belts of deformation that affect the Earth's lithosphere - rifts, orogens, and belts of strike-slip deformation.

Course Description: Geometric, kinematic, and dynamic analysis of structures produced by deformation. Stress and the origin of faults, joints, veins, folds, and tectonites. Brittle and ductile strain in rocks. Extensional, strike-slip, and compressional structural associations. Regional structure, orogens, and crustal tectonics. Lab exercises include structural interpretation for subsurface hydrocarbon and mineral exploration, stereographic techniques for structural analysis, and the study of rock fabrics.

Course Prerequisites: EAS 233 and any 300-level EAS course. Not available to students with credit in EAS 321

Note: by attending classes in EAS 421 you represent that you have completed the above prerequisites, or that you have been granted a waiver of a prerequisite signed by the instructor and the associate chair.

Course Objectives and Expected Learning Outcomes:

By the end of the course you should have a broad understanding of the major structures produced by deformation of the Earth's lithosphere and how they originate. You should be able to solve problems in the understanding of deformed rocks in three dimensions in hand sample and map scale, and you should be able to explain how these structures were produced by tectonic processes.

You should have a clear understanding of the role and differences between the following three levels of structural analysis:

- **Geometry:** Learn how to describe the **shapes and three-dimensional orientations** of structures in rifts, orogens, and strike-slip belts.
- **Kinematics:** Learn how to interpret the **movements** that have that have distorted the Earth's lithosphere, over time.
- **Dynamics:** Learn what can (and cannot) be deduced about **forces, stresses, and energy** involved in the deformation of the Earth's lithosphere.

To achieve these objectives you will need to learn some new techniques. For example, sections of the course will be devoted to measuring and understanding strain and stress. Those techniques will be introduced step-by-step, as they are needed to understand different tectonic environments. Thus we will alternate between sections that focus on new techniques for understanding processes at a small scale, and larger-scale examination of major features of the lithosphere.

The emphasis in structural geology is on solving problems, not on learning facts. For these reasons, the laboratory sessions are particularly important.

Classes

Lectures

Lectures take place MWF at 10 am. Please be respectful of your instructor and other students by being on time and by not talking or causing other distractions in class. If you carry a cell phone make sure it is off during lectures. Handouts may be provided at the start of some lectures. If you have to miss a lecture for some medical or other unavoidable reason, try to have a 'lecture buddy' who can make notes for you and collect any handouts. I do not bring copies of previous handouts to subsequent lectures. **Note:** Recording is permitted only with the prior written consent of the professor or if recording is part of an approved accommodation plan.

Labs

You will be registered in either the Monday (D1) or Tuesday (D2) lab. You must stick to your assigned lab unless you have a particular reason for changing labs in a given week; any change must be approved in advance by your TA. Note that there are gaps in the lab schedule for both the Monday and the Tuesday lab to deal with holidays and other special events. Do not assume that your other classes will have the same lab schedule.

Labs will start in ESB 4-09 but for parts of some labs we you will break out into ESB 1-39 for computer work. We may need to schedule computer time so that everyone gets a turn on the available machines.

For each lab you should have the following available:

- Tracing paper, Graph paper, a ruler at **least 30 cm long** (11.81 inches)
- A calculator with scientific functions
- Lead pencils that are sharp and **can be kept sharp** (old fashioned pencils and a sharpener, or mechanical pencils with 0.5 mm leads).
- A good eraser.
- Some coloured pencils ('pencil crayons'). Please note that these are useful for labelling structures in diagrams but must never be used for accurate constructions!
- Your one-card

While working in the lab, please respect the general lab rules. In addition, please adhere to the following special rules:

- **No personal entertainment devices with headphones may be worn.** Often we explain something to everyone in the class, even if one person asked a question. We should not be competing for your attention.
- **When you are asked to use a computer,** no program may be used in the lab other than those directly related to structural geology. Surfing the web or reading your email while the lab is in session is disrespectful to your instructor and TA, and is not an appropriate use of the resource.

Resources

Required Textbook: *Structural Geology* by Haakon Fossen.

This valuable text allows you to review all the main types of structure found in the Earth's lithosphere, and includes review material for the major topics covered in the introductory class EAS 233.

Recommended or Optional Learning Resources:

In addition to the text, you may also find that the laboratory manual for EAS 233 contains useful reference material. Note: For students who took EAS 233 in 2008 and earlier, there have been some changes to the content of this prerequisite course. The 2013 course manual for EAS 233 contains summary sections on many of the major structures covered. Copies of this manual will be provided on request if you took EAS 233 in 2008 or before, or if you took an introductory structure class at another institution

Notes and links will be posted during the course at <http://courses.eas.ualberta.ca/eas421>

Marks, together with support materials that can't be posted on a public web site (e.g. for copyright reasons) will be posted at eclass: <https://eclass.srv.ualberta.ca/> where you will have to sign in with your university CCID and password.

Representative Evaluative Material:

Representative sample exam questions will be posted on the class web site during the first three weeks of the class, to indicate the type of question to be asked in the mid-term tests. Sample final exam questions will be posted in October.

Evaluation and grading**Grade Evaluation:**

Grade evaluation will be by a combination of relative standing in the class and absolute achievement. This means that each assignment and test will be assigned a numerical mark and those marks will be summed using the weighting below. A final grade will be assigned based on the overall quality of the work done and where possible on natural breaks in the grade distribution, so as to be consistent in standard with previous years' grading. No absolute grade distribution ('curve') will be imposed on the grades, but the overall level and range of grades is likely to be similar to other classes at this level at the University of Alberta, in which the mean grade is typically in the B to B+ range.

Grades are unofficial until approved by the Department and/or Faculty offering the course.

COMPONENT	WEIGHTING	DATE
Midterm	15%	10 am Monday Oct 20
Lab assignments	45%	Weekly
Final Exam*	40%	9 am Thursday Dec 11

* WARNING: Students must verify this date on Bear Tracks when the Final Exam Schedule is posted

Format of Exams:

Exams will combine theoretical and practical aspects of the course, and will include a mixture of short-answer, longer written answer, and practical questions. Questions in the mid-term test will cover fundamental techniques; you will be asked to answer all the questions. The final exam will contain a mixture of practical and theoretical questions and will include both a compulsory section and a choice of questions.

Requirements for exams: Your student photo I.D. is required at exams to verify your identity. Students will not be allowed to begin an examination after it has been in progress for 30 minutes. Students must remain in the exam room until at least 30 minutes has elapsed. Electronic equipment other than calculators cannot be brought into examination rooms and hats should not be worn.

Bring to the exam room all the materials you normally bring to the labs. Before you enter the exam room, please ensure all textbooks, notes, and review materials are securely stowed inside a bag, and that you have unpacked all the pens, pencils, etc. that you plan to use. You are not permitted to look through your bag during the exam.

Missed Term Exams and Assignments:

A student who cannot write a term examination or complete a term assignment due to incapacitating illness, severe domestic affliction or other compelling reasons can apply for extension of time to complete an assignment or deferral of the midterm weight to the final examination. If you are in this situation at the time of a lab or examination, please be sure to contact your instructor within 48 hours of the missed class. Please note that illness in the days before an exam is not normally considered to be grounds for deferral; don't leave your study to the last minute! Deferral of term work is a privilege and not a right; there is no guarantee that a deferral will be granted.

Deferred Final Examination:

A student who cannot write the final examination due to incapacitating illness, severe domestic affliction or other compelling reasons can apply for a deferred final examination. Such an application must be made to the student's Faculty office within 48 hours of the missed examination. Deferred examinations are a privilege and not a right; there is no guarantee that a deferred examination will be granted.

Reexamination:

A student who writes the final examination and fails the course may apply for a reexamination. Reexaminations are rarely granted in the Faculty of Science. These exams are governed by University (Calendar section 23.5.5) and Faculty of Science Regulations (Calendar section 182.5.9).

Student Responsibilities:

Academic Integrity: 'The University of Alberta is committed to the highest standards of academic integrity and honesty. Students are expected to be familiar with these standards regarding academic honesty and to uphold the policies of the University in this respect. Students are particularly urged to familiarize themselves with the provisions of the *Code of Student Behaviour*, online at

www.ualberta.ca/secretariat/appeals.htm,

and avoid any behaviour which could potentially result in suspicions of cheating, plagiarism, misrepresentation of facts and/or participation in an offence. Academic dishonesty is a serious offence and can result in suspension or expulsion from the University.'

All forms of dishonesty are unacceptable at the University. Any offense will be reported to the Senior Associate Dean of Science who will determine the disciplinary action to be taken. Cheating, plagiarism and misrepresentation of facts are serious offenses. Anyone who engages in these practices will receive at minimum a grade of zero for the exam or paper in question and no opportunity will be given to replace the grade or redistribute the weights. As well, in the Faculty of Science the sanction for **cheating** on any examination will include **a disciplinary failing grade** (no exceptions) and senior students should expect a period of suspension or expulsion from the University of Alberta.

EAS 421 is a very practical course in which you may benefit from discussions with your instructor, teaching assistants, and fellow students in devising problem-solving strategies. However, the actual answers you record must be exclusively your own work. This means that:

- observations must be your own;
- written answers must be expressed in sentences and paragraphs **composed uniquely in your own words**;
- every calculation and construction **must be carried out by you**.
- every diagram must be **designed and drawn by you**.

(In the event that you are explicitly instructed to work in groups on a problem, your answer must contain a clear written acknowledgement of the other participants and a statement of who did what.)

Cell phones: Cell phones are to be turned off during lectures, labs and seminars. Cell phones are not to be brought to exams.

Deferrals, reexaminations: Misrepresentation of Facts to gain a deferral of an assignment, test, or examination or a reexamination is a serious breach of the *Code of Student Behaviour*.

Support

Students with disabilities: Students who require accommodation in this course due to a disability are advised to discuss their needs with Specialized Support & Disability Services (2-800 Students' Union Building).

Academic support centre: Students who require additional help in developing strategies for better time management, study skills or examination skills should contact the Academic Support Centre (2-703 Students' Union Building).

Legalities

Copyright: This documents, and other documents distributed during the course (except where otherwise stated), are copyright © Dr. John Waldron, Department of Earth and Atmospheric Sciences, Faculty of Science, University of Alberta (2010), and may not be sold or reproduced without permission.

Disclaimer: Any typographical errors in this Course Outline are subject to change and will be announced in class. The date of the final examination is set by the Registrar and takes precedence over the final examination date reported in this syllabus.

EAS 421/521 Tentative Schedule

Date	Topic	Lecture	Lab: 421: Mon, Tue; 521: Wed
Wed-Sep-03	Introduction		
Fri-Sep-05	Orientation data	Lines and planes	
Mon-Sep-08		Orientation data	
Wed-Sep-10		Orientation statistics	
Fri-Sep-12	Global tectonics	Plate boundaries	
Mon-Sep-15		Plate kinematics	0. Structural geometry
Wed-Sep-17		Measuring plate motion	0. Structural geometry (required for 521)
Fri-Sep-19	Stress	Stress	
Mon-Sep-22		States of stress	1. Orientation data
Wed-Sep-24		Stress and fracture	1. Orientation data
Fri-Sep-26		Measuring stress	
Mon-Sep-29	Extension tectonics	Rifts	2. Plate kinematics
Wed-Oct-01		Fault geometries	2. Plate kinematics
Fri-Oct-03		Passive Margins	
Mon-Oct-06		Salt and gravity tectonics	3. Stress, fractures and faults
Wed-Oct-08	Strain in 2D	Strain - longitudinal and shear strain	3. Stress, fractures and faults
Fri-Oct-10		Strain in 2D	
Mon-Oct-13			
Wed-Oct-15		Practical strain measurement	Poster planning (521)
Fri-Oct-17		Progressive strain & flow	
Mon-Oct-20		Mid-Term Test	4. Normal faults and rifts
Wed-Oct-22	Orogens	Introduction to Orogens	4. Normal faults and rifts
Fri-Oct-24		Terranes	
Mon-Oct-27	Foreland thrust belts	Foreland fold & thrust belts	5. Deformation analysis 1
Wed-Oct-29		Thrust kinematics	5. Deformation analysis 1
Fri-Oct-31		Section balancing	
Mon-Nov-03		Thrust dynamics	6. Strain in 2D
Wed-Nov-05	Subduction, Accretion, Mélange	Mélange	6. Strain in 2D
Fri-Nov-07	Metamorphic belts	Slate belts	
Mon-Nov-10			
Wed-Nov-12		Polyphase deformation	Poster drafts (521)
Fri-Nov-14		Pressure-temperature-time	
Mon-Nov-17	Rheology	Rheology	7. Fold and thrust belts
Wed-Nov-19		Crystal defects and deformation	7. Fold and thrust belts
Fri-Nov-21	Shear zones	Shear zones	
Mon-Nov-24		Fabric in shear zones	8. Deformation and metamorphism
Wed-Nov-26	Strain in 3D	Strain in 3D	8. Posters (521)
Fri-Nov-28	Strike-slip tectonics	Strike-slip	
Mon-Dec-01		Transpression & transtension	9. Shear zones
Wed-Dec-03		Review	9. Posters (521)
