## Plate kinematics

For calculations dealing with the whole Earth we use a coordinate system in which the origin is at the centre of the Earth. Axis 1 or x points towards the intersection of the equator and the Greenwich meridian, 2 or y is towards the intersection of the equator and $90^{\circ} \mathrm{E}$, and 3 or $\mathrm{z}=$ is towards the north pole. Longitudes east are positive angles, west are negative.

## Geographic coordinates converted to vector form

Components for Earth radius vector $\mathbf{r}$ at latitude $\lambda$
longitude $\phi$ where $r=6370 \mathrm{~km}$
$r_{1}=r \cos (\lambda) \cos (\phi)$
$r_{2}=r \cos (\lambda) \sin (\phi)$
$r_{3}=r \sin (\lambda)$
Components for a unit north arrow $\hat{\mathbf{N}}$ at latitude $\lambda$ longitude $\phi$
$N_{1}=-\sin (\lambda) \cos (\phi)$
$N_{2}=-\sin (\lambda) \sin (\phi)$
$N_{3}=\cos (\lambda)$
Components for a unit east arrow $\hat{\mathbf{E}}$ at longitude $\phi$
$E_{1}=-\sin (\phi)$
$E_{2}=\cos (\phi)$
$E_{3}=0$

## Paleomagnetism

Magnetic inclination related to latitude:

$$
\tan (I)=2 \tan (\lambda)
$$

where $I=$ inclination, $\lambda=$ latitude .
Spreading half-rate related to age of magnetic anomaly

$$
v=w /\left(t_{1}-t_{2}\right)
$$

where $v=$ spreading half-rate, $w=$ distance from ridge, $t_{1}, t_{2}=$ ages of anomalies.

## Vector circuit for Euler poles

For any three plates A, B, C, if ${ }_{A} \boldsymbol{\Omega}_{B}$ signifies rotation of plate B relative to plate A then ${ }_{A} \boldsymbol{\Omega}_{B}+{ }_{B} \boldsymbol{\Omega}_{C}+{ }_{C} \boldsymbol{\Omega}_{A}=\mathbf{0}$ where ${ }_{A} \boldsymbol{\Omega}_{B}$ signifies motion of $B$ relative to $A$

## Vector circuit for triple junction

At a triple junction involving plates A, B, C, plate motion vectors obey ${ }_{A} \mathbf{v}_{B}+{ }_{B} \mathbf{v}_{C}+{ }_{C} \mathbf{v}_{A}=0$ where ${ }_{A} \mathbf{v}_{B}$ signifies motion of $B$ relative to $A$

## Euler poles for 24 plates

in "Pacific Plate" reference frame. (Poles from the model MORVEL; DeMets et al. 2010, Geophys.J.Int. 181, 1-80)

| Plate |  | Rotation relative to Pacific Plate |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Lat ${ }^{\circ} \mathrm{N}$ | Long ${ }^{\text {E }}$ | $\omega$ deg/Myr |
| Amur | AM | 65.9 | -82.7 | 0.929 |
| Antarctica | AN | 65.9 | -78.5 | 0.887 |
| Arabia | AR | 60 | -33.2 | 1.159 |
| Australia | AU | 60.1 | 6.3 | 1.079 |
| Caribbean | CA | 55.8 | -77.5 | 0.905 |
| Cocos | CO | 42.2 | -112.8 | 1.676 |
| Capricorn | CP | 62.3 | -10.1 | 1.139 |
| Eurasia | EU | 61.3 | -78.9 | 0.856 |
| India | IN | 61.4 | -31.2 | 1.141 |
| Juan de Fuca | JF | -0.6 | 37.8 | 0.625 |
| Lwandle | LW | 60 | -66.9 | 0.932 |
| MacQuarie | MQ | 59.2 | -8 | 1.686 |
| North America | NA | 48.9 | -71.7 | 0.75 |
| Nubia | NB | 58.7 | -66.6 | 0.935 |
| Nazca | NZ | 55.9 | -87.8 | 1.311 |
| Philippine Sea | PS | -4.6 | -41.9 | 0.89 |
| Rivera | RI | 25.7 | -104.8 | 4.966 |
| South America | SA | 56 | -77 | 0.653 |
| Scotia | SC | 57.8 | -78 | 0.755 |
| Somalia | SM | 59.3 | -73.5 | 0.98 |
| Sur | SR | 55.7 | -75.8 | 0.636 |
| Sundaland | SU | 59.8 | -78 | 0.973 |
| Sandwich | SW | -3.8 | -42.4 | 1.444 |
| Yangtze | YZ | 65.5 | -82.4 | 0.968 |

Rate of plate motion at a point on boundary
In vector terms, slip vector for motion at any point on a plate boundary between plates $A$ and $B$ :

$$
{ }_{A} \mathbf{v}_{B}={ }_{A} \boldsymbol{\Omega}_{B} \times \mathbf{r}
$$

where: $\mathbf{r}$ is the radius vector of the Earth at the point on the plate boundary and ${ }_{A} \mathbf{\Omega}_{B}$ is the plate rotation vector
North component of ${ }_{A} \mathbf{v}_{\mathbf{B}}$ is given by $v_{N}={ }_{A} \mathbf{v}_{\mathbf{B}} \cdot \hat{\mathbf{N}}$ East component of ${ }_{A} \mathbf{V}_{\mathbf{B}}$ is given by $v_{E}={ }_{\mathrm{A}} \mathbf{V}_{\mathbf{B}} . \hat{\mathbf{E}}$
Alternatively, for a point at angular distance $\theta$ from the Euler pole
$\nu=\omega R \sin \theta$
where $R$ is the radius of the Earth ( 6370 km ), $\omega$ is the rate of rotation in radians per million years, and $v$ is the rate of slip in km per million years (or mm per year)

Note: sign conventions here follow the convention used by most geophysicists but not the text Earth Structure by Van der Pluijm \& Marshak (2004)
